Enterprise Integration Engineer

Alternate Titles: Advanced Process Controls Engineer, Enterprise Application Integration Engineer, Analyst – Control and Optimization, Technical Analyst, Systems Integrator, Technical Solutions Engineer

Description: Enterprise Integration Engineers devise strategy definitions (competitive, supply chain, operational), performance evaluation systems, process design/re-design, and enabling technologies. They consider all these issues in an integrated way to align the company strategy with process improvement projects in order to achieve excellent performance.

They provide prompt, accurate system integration and support to client's customers worldwide. This ranges from assistance with using client products, complex software engineering analysis and integration of client software onto different set-top boxes and developing test programs to validate the porting interfaces. In general, engineers should be familiar with several areas of client technology and be able to intelligently assess specific problems encountered in the field and determine an appropriate path to resolution.

Sources of Material: Certified Automation Professional Body of Knowledge, Automation Competency Model.

Performance Domains:

<u>Domain I: Define Customer Requirements</u> <u>Domain II: Business and Physical Integration</u>

Domain III: Application Integration

Domain IV: Testing and Technical Support

	Customer Requirements – identify and analyze customer requirements all integration solutions.
Task 1: Determine order to meet the b	e the type/degree of integration required through cost/benefit analysis in ousiness need.
Knowledge of:	Business integration Physical integration Application integration Various cost/benefit tools Control and information technologies (MES) and equipment Information technology and equipment Company procedures Performance metrics
Skill in:	Analyzing cost versus benefit (e.g., life cycle analysis)

	Choosing the type/degree of integration
	Estimating the cost of control equipment and software
	Leading a individual or group discussion
	Communicating effectively
	Writing in a technical and effective manner
	Building consensus
	chnical studies for the preliminary integration strategy by gathering data appropriate analysis relative to requirements in order to define and risks.
Knowledge of:	Process control theories
	Machine control theories and mechatronics
	Risk assessment techniques
Skill in:	Conducting technical studies
	Conducting risk analyses
	Defining primary control strategies
	Writing in a technical and effective manner
	Compiling and summarizing information efficiently
	Presenting information
	sustification analysis by generating a feasibility cost estimate and using all model to determine project viability.
Knowledge of:	Financial models (e.g., Return On Investment, Net Present Value)
lano madago da	Business drivers
	Costs of control equipment
	Estimating techniques
Skill in:	Estimating the cost and scope of the system
Skiii iii.	Running the financial model
	Evaluating the results of the financial analysis for the automation
	portion of the project
Domain II: Rusina	ss and Physical Integration – determine solutions to integrate physical
	as to increase interoperability, usability, and security.
	l implement solutions to integrate business systems with information and
operations systems.	
Knowledge of:	Business Integration and Manufacturing Operations Management
Milowicuge of.	(MOM)
	Detailed Production Scheduling
	 Integration with Business Planning and Logistics
	 Level 3 Equipment Hierarchy
	• Level 3-4 Boundary
	Other Manufacturing Activities
	 Production Operations Management
	Supply Chain Logistics
Skill in:	Evaluating strategies
Mill III.	Design Design
	Design

Task 2: Perform se	curity analyses, and regulatory compliance assessments by identifying
	s in order to comply with applicable standards, policies, and regulations.
Knowledge of:	Applicable standards (e.g., ISA S84, IEC 61508, 21 CFR Part 11, NFPA)
	Company standards
Skill in:	Assessing security requirements or relevant security issues
	Applying regulations to design
Task 3: Establish standards, templates, and guidelines as applied to the automation system using the information gathered in the definition stage and considering human-factor effects in order to satisfy customer design criteria and preferences.	
Knowledge of:	Process Industry Practices (PIP) (Construction Industry Institute)
	IEC 61131 programming languages
	Customer standards
	Vendor standards
	Template development methodology
	Field devices
	Electrical codes and standards (e.g. NEC, UL, FM, etc.)
	ISA standards (e.g., S88)
Skill in:	Developing programming standards
	Selecting and sizing equipment
	Designing low-voltage electrical systems
	Preparing drawing using CAD software
Task 4: Create detailed equipment specifications and data sheets based on vendor selection criteria, characteristics and conditions of the physical environment, regulations, and performance requirements in order to purchase equipment and support system design and development.	
Knowledge of:	Computer and server hardware
_	Network hardware & components
	Electrical codes and standards (e.g. NEC, UL, FM, etc.)
	Vendors' offerings
Skill in:	Designing low-voltage electrical systems
	Selecting and sizing computers
	Selecting and sizing network hardware and components
	Selecting and sizing control equipment
	Evaluating vendor alternatives
Task 5: Select the	physical communication media, network architecture, and protocols
based on data requi	rements in order to complete system design and support system
development.	
Knowledge of:	Vendor protocols
	Object Linked Embedding for Process Control (OPC)
	Ethernet and other open industrial and enterprise networks
	Physical requirements for networks/media
	Physical topology rules/limitations

	AT . 1 1 '
	Network design
	Security requirements
CI III I	Grounding and shielding practices
Skill in:	Designing networks based on chosen protocols
	functional description of the automation solution (e.g., control scheme, ss) using rules established in the definition stage in order to guide ogramming.
	Control theory
	Visualization, alarming, database/reporting techniques
	Documentation standards
	Vendors' capabilities for their hardware and software products
	General control strategies used within the industry
	Process/equipment to be automated
	Operating philosophy
	Writing functional descriptions
	Interpreting design specifications and user requirements
	Communicating the functional description to stakeholders
system design into p	e detailed design for the project by converting the engineering and purchase requisitions, drawings, panel designs, and installation details specification and functional descriptions in order to provide detailed
	in the deployment.

	Interpreting control strategies and logic drawings
	Programming and/or configuration capabilities
	Implementing connections to remote devices
	Documenting configuration and programs
	Interpreting P&IDs
	Interfacing systems
Task 6: Implement	data transfer methodology that maximizes throughput and ensures
	communication protocols and specifications in order to assure efficiency
and reliability.	
Knowledge of:	Specific networking software products (e.g., I/O servers).
	Network topology
	Network protocols
	Physical media specifications (e.g., copper, fiber, RF, IR)
	Computer operating systems
	Interfacing and gateways
	Data mapping
Skill in:	Analyzing throughput
	Ensuring data integrity
	Troubleshooting
	Documenting configuration
	Configuring network products
	Interfacing systems
	Manipulating data
Task 7: Implement	security methodology in accordance with stakeholder requirements in
order to mitigate los	ss and risk.
Knowledge of:	Basic system/network security techniques
	Customer security procedures
	Control user-level access privileges
	Regulatory expectations (e.g., 29 CFR Part 11)
	Industry standards (e.g., ISA)
Skill in:	Documenting security configuration
	Configuring/programming of security system
	Implementing security features
Task 8: Review cor	nfiguration and programming using defined practices in order to
	e with functional requirements.
Knowledge of:	Specific control software products
	Specific HMI software products
